Schedule 2: University of Melbourne Graduate Attributes (Graduate Research)

The University of Melbourne educational experience prepares well-rounded graduates who are academically outstanding, practically grounded and socially responsible. Melbourne's graduates are distinguished by their broad outlook and openness to different perspectives.

Melbourne's degrees develop research and reasoning skills that equip graduates to be influential citizens with high leadership potential. The University's graduates engage with national and global issues and are attuned to social and cultural diversity. They have high levels of self-awareness and value their personal integrity and well-being.

Attribute 1: Academic distinction

A Melbourne graduate research degree provides graduates with a mastery of advanced research methodologies, deep engagement with disciplinary debates, and the capacity to produce original research. Melbourne graduate researchers are critical, creative and independent thinkers, equipped with outstanding reasoning, problem-solving, and project management skills.

The Melbourne graduate research experience enables graduates to apply advanced research and analytical skills to address complex challenges across diverse contexts. They contribute to the expansion of knowledge that shapes the future and communicate their research with clarity and impact.

Attribute 2: Active citizenship

Melbourne graduate researchers engage with both global and local communities through ethical and sustainable research practices, meaningful dialogue, and respectful partnerships. They collaborate across cultural and disciplinary boundaries, and they value and respect Indigenous knowledge, as well as research led by Indigenous people and research on Indigenous themes.

The Melbourne graduate research experience empowers researchers to lead with purpose, drawing on the courage, insight, and expertise required to challenge established ideas and create innovative solutions. Graduate researchers become leaders in their professions and communities, including through engagement, collaboration, co-design, and the co-production of knowledge. They consider the societal impact of their research and contribute actively to academic and civic discourse.

Attribute 3: Integrity and self-awareness

Melbourne graduate researchers conduct their research with integrity, respect, and a strong commitment to ethical responsibility.

The opportunities provided through the Melbourne graduate research experience foster graduates who are curious, willing to explore, and unafraid to experiment and learn from mistakes. They demonstrate resilience and adaptability in the pursuit of knowledge, and they are self-aware, reflective, and proactive researchers who embrace opportunities for ongoing learning and professional growth.
